

Stop flying blind. Give the board one truth.

iProjectX is not a static register. It calculates project health, explains RAG and money, governs stage gates, and isolates every tenant — Agile and Waterfall on the same spine.

1

Truth · Agile & Waterfall

See. Explain. Govern. Trust.

SEE**Pulse + Cockpit**

This week's movement by area. Attention cards instead of a 40-slide appendix.

EXPLAIN**Health + money**

Weighted health. Explain This on forecast, spend, and budget. RAG is earned, not typed.

GOVERN**Gates + RAID**

Approvals with checklist evidence. Risks, actions, issues, decisions on the same spine.

TRUST**Tenant-hard**

MFA, RLS, optional SSO / BYOD, white-label, in-house AI by default.

A register cannot

Paint RAG by hand

Schedule, FAC, and risk already disagree.

Brief the board on last month

No pulse. No drivers. Overruns found at year-end.

Prove a gate was earned

Approvals in email. RAID in a workbook nobody opens.

iProjectX does

Calculate health across eight dimensions

Schedule, financial, scope, delivery, resource, risk, dependencies, benefits.

Surface the next decision

Pulse digest, delay cascades, scoped KPIs, investment ranking.

Leave evidence

Stage-gate decisions, audit log, Excel evidence packs.

RAG the room can defend

Green ≥ 80 · On the rails**Amber 65–79 · Act this week****Red < 65 · A decision, not a colour**

A named override is allowed — and marked — so nobody pretends the engine agreed.

Expression of Interest

Walk their portfolio on the cockpit. Leave this sheet. Capture EOI the same day.
